# Urban Lite

NETIS Registration No.: KT-990548-A

**This is a natural-colored landscaping pavement that sprays a thin layer of special aggregate onto road surfaces.**

## Overview

- Urban Lite is a landscaping pavement material that harmonizes with nature.
- It is a pavement covering material with a texture similar to dirt and a soft, natural color.
- The color of the soil-base material helps to give roads an "earthy" feel that harmonizes with the natural environment.

## Features

- High porosity with good cushioning provides a soft place for walking.
- Work can be done at normal temperature so it has excellent workability, and the curing time is relatively short.
- It can make existing asphalt pavement fit in with the natural landscape.
- Compatible with water-permeable pavement.
- Has better economic efficiency than general landscaping pavement.

## Applications

- Walking paths and park paths
- Jogging paths
- Slope pavement protection
- Protection of historic sites
- Building exteriors, etc.
