# Urban SC Color

This is a landscaping pavement that uses colored sand. It is relatively strong, making it ideal for light traffic.

## Overview

- Thin-layer spray-type color pavement that uses burned colored sand (color ceramics) as the main aggregate.
- There is virtually no discoloration or deterioration, and it has excellent durability.
- Can be used for roads with light traffic or parking lots.

## Features

- Has excellent, strength, weather resistance, oil resistance, acid resistance, and wear resistance, and there is virtually no discoloration/deterioration.
- Work can be done at normal temperature, so the curing time is relatively short.
- Possible to select a color that matches with the surrounding landscaping from a wide variety of colors.
- Slip resistance that is ideal for walking (BPN value or 60 or higher).
- Cracks and peeling are reduced, and it can be applied to roads with light traffic and parking lots.

## Applications

- Walking paths
- Garden paths
- Cycling paths
- Platforms
- Parking lots
- Roads with light traffic
- Multipurpose open areas
- Shopping malls, etc.
