Urban Tough Court

This is an elastic pavement made with rubber fibers.

Overview

- Elastic pavement made with a combination of rubber fibers and urethane resin.
- Has excellent shock absorption and cushioning, which reduces the burden placed on the knees and back, and also has excellent water permeability.

Features

- Usage of rubber fibers greatly improves water permeability so there is virtually no puddling.
- Rubber fiber cushion layer produces excellent comfortability and safety.
- Because it has good workability, it can be used for various locations including rooftops and stairs.
- Construction can be done at a relatively low cost, so it has overall cost benefits.

Applications

- Playgrounds
- Jogging paths
- School playgrounds
- Walking paths
- Tennis courts
- Stairs
- Rooftop courts
- Event open areas
- Parks / Garden paths
- Preschool playgrounds
