

Roads, Parking Lots
and Airfields
(Asphalt-based)

ST Repair Coat

This is an inexpensive pavement for refreshing damaged asphalt pavement surfaces and improving road surface quality and extending the lifespan.

Overview

- This is a maintenance repair method where the surface of the asphalt pavement is heated by a heater, is scrapped up, and then a new asphalt pavement is spread and evened.

Features

- Surface treatment helps to extend the lifespan.
- Road surface quality including slip resistance is renewed.
- Construction work is inexpensive because there is no waste material.

Applications

- Light traffic routes, daily service roads
